BEGINNER EDITION

OpenMontage Playbook

Apne laptop pe, bina ek bhi paid API key ke, AI se reels edit karna. Setup se lekar pehle reel tak, step by step.

Ye version kiske liye hai: jisne abhi tak OpenMontage ka naam suna hai par repo khol ke ghabra gaya. Yahan har step ke saath likha hai ki exactly kya karna hai, kya type karna hai, aur jab kuch toote to kya dekhna hai.

SHURU YAHAN SE

Pehle ye padh lo (3 minute)

Ye woh system hai jisse main apne reels edit karta hoon. Open source hai, tumhare laptop pe chalta hai, aur talking head reels ke liye ek bhi paid key nahi chahiye.

OpenMontage kya hai, ek line mein

Ye koi editing app nahi hai. Isme buttons aur timeline nahi hain. Ye ek folder (repo) hai jo tumhara AI coding assistant chalata hai. Tum bolte ho kya banana hai, wo kaatta, jodta, captions lagata aur render karta hai.

Tum karte ho: clips ek folder mein daalte ho, folder assistant mein kholte ho, ek instruction dete ho.

Wo karta hai:

1	2	3	4	5
Har clip transcribe, word by word timing ke saath	Cut plan: kaunsi clip kahan jayegi	Captions likhna aur bolne se sync	Overlays, chips, graphics	Preview, approval, final render

Har badi decision pe tumse pooch kar aage badhta hai. Matlab tumhe naya software nahi seekhna. Tumhe bas ye seekhna hai ki **instruction kaise deni hai.** Wahi is guide ka asli kaam hai.

KUCH WORDS JO AAGE AAYENGE

Repo

GitHub pe rakha hua code ka folder. `git clone` se apne laptop pe copy ho jaata hai.

AI coding assistant

Claude Code, Cursor, Codex, Copilot. Koi bhi ek. Yahi OpenMontage ko chalata hai.

Pipeline

Ek type ka workflow. Talking head ke liye alag, screen demo ke liye alag. Shuru mein sirf ek chahiye.

Transcribe

Audio se text nikaalna, har word ka time ke saath. Yahi se captions bante hain.

Render

Final video file banana. 4K mein time lagta hai, laptop garam hota hai. Normal hai.

Atelier vs Templated

Composition ke do tareeke. Ek generic dikhta hai, ek tumhara. Page 8 pe poori baat.

Ek honest baat

Ye guide isliye nahi hai ki tum ek aur naya tool collect kar lo. Har teesre din naya tool aata hai. Ye isliye hai ki tum ek cheez pe expertise bana lo. Wahi asli faayda hai.

PAISA

Kitna lagega: zero

Seedha bolta hoon. Jo cheezein paise maangti hain, wo AI se video ya image *generate* karne wali hain. Tum khud camera pe bolte ho, toh unki zarurat hi nahi padti.

Kaam	Tool	Kharcha
Transcription, Hinglish bhi	Whisper, tumhare laptop pe	Free
Word by word captions	Remotion	Free
Cutting, joining, encoding	FFmpeg	Free
Motion graphics, overlays	Remotion, HyperFrames	Free
Narration voice	Piper TTS, offline	Free
Archival footage	Archive.org, NASA, Wikimedia	Free
Stock footage	Pexels, Pixabay, Unsplash	Free key
AI video banana	Veo, Kling, Seedance, Sora	Paid
AI image banana	FLUX, Imagen, GPT Image	Paid
Premium voice	ElevenLabs, Google, OpenAI	Paid

Iska proof: Day 58 ka reel

Reel banate waqt maine machine ka capability check chalaya. Video generation 0 of 21 configured. Image generation 0 of 12. Voice 0 of 7. Matlab ek bhi paid key nahi thi. Phir bhi poora reel bana, 4K 60fps, captions aur graphics ke saath. Talking head path ko in mein se kuch nahi chahiye.

Shortcut

Upar wali table ki pehli 7 lines tumhare liye hain. Neeche wali 3 ko tab tak bhool jao jab tak tum camera pe khud bol rahe ho.

EK BAAR KA KAAM

Setup (30 se 60 minute)

Aaram se karo. Ye sirf ek baar karna hai.

1 **Ye chaar cheezein install karo**

- Python 3.10 ya upar (python.org)
- Node.js 18 ya upar (nodejs.org)
- FFmpeg (ffmpeg.org)
- Ek AI coding assistant: Claude Code, Cursor, Codex, ya Copilot

Pehli teen free hain, official site se seedha install. Install ke baad terminal mein `python --version`, `node --version`, `ffmpeg -version` chala ke confirm kar lo.

2 **Repo clone karo**

```
git clone https://github.com/calesthio/OpenMontage.git
cd OpenMontage
make setup
```

Ye command Python packages, Remotion aur Piper TTS sab set kar deta hai. Mac aur Linux pe yahi kaafi hai.

3 **Windows pe `make` nahi chalta, toh ye chalao**

PowerShell mein, OpenMontage folder ke andar:

```
py -3 -m venv .venv; .\.venv\Scripts\Activate.ps1; python -m pip install -r
requirements.txt; cd remotion-composer; npm install; cd ..; python -m pip install
piper-tts; Copy-Item .env.example .env
```

Agar `npm install` pe `ERR_INVALID_ARG_TYPE` aaye, uski jagah `npx --yes npm install` chalao. Windows ka jaana pehchana issue hai.

4 **API keys wala step skip kar do**

Setup ek `.env` file banata hai jisme keys ki jagah hoti hai. Sab optional hain. Khaali chhod do. Talking head reels bina ek bhi key ke ban jaate hain.

> **Setup ho gaya, kaise pata chale?**
>
> Repo folder mein `.venv` folder, `remotion-composer/node_modules` folder, aur `.env` file dikh rahi hai? Ho gaya. Ab is folder ko haath mat lagao, ye background mein chalta rahega.

HAATH SE KARKE DEKHO

Tumhara pehla reel

1. **Clips ek folder mein daalo**

   Naam simple: `clip1.mp4`, `clip2.mp4`, aage isi tarah. Phone se seedha nikaali 4K clips bilkul theek hain.

   Pehle compress mat karo.

   Jitni achhi quality andar, utni hi bahar.

2. **Wo folder apne AI assistant mein kholo**

   OpenMontage repo alag jagah rahega. Tum apne clips wale folder mein kaam karoge. Claude Code mein: us folder mein terminal kholo aur `claude` likho.

3. **Ye instruction do, waise ka waisa**

```
Is folder ki saari clips dekho aur inka ek Instagram reel banao.
OpenMontage use karo, talking-head pipeline.
Pehle har clip transcribe karo, Roman Hinglish me, Devanagari nahi.
Captions bilkul wahi shabd rakho jo maine bole hain, 3 se 4 shabd ek baar me, meri thodi
ke paas, chehre pe nahi.
Frame ke neeche koi dark gradient ya black box mat lagana.
Composition atelier mode me likhna, stock template mat use karna.
Pehle poore reel ka ek preview render karke dikhana, approval ke baad hi final banana.
```

Har line kuch specific rok rahi hai jo warna default mein galat ho jaata hai:

`talking-head pipeline`	Galat pipeline nahi uthayega
`Roman Hinglish, Devanagari nahi`	Captions padhne layak rahenge
`wahi shabd, 3 se 4 ek baar me`	Paraphrase nahi karega, chunks chhote rahenge
`thodi ke paas, chehre pe nahi`	Caption aankhon ko nahi dhakega
`koi dark gradient ya black box nahi`	Achhi lighting kharab nahi hogi
`atelier mode`	Output generic nahi dikhega (page 8)
`pehle preview, phir final`	4K render mein ghanta waste nahi hoga

PEHLA REEL, AAGE

Preview se final tak

4 **Preview dekho, saaf saaf changes bolo**

Timestamp ke saath batao. Jaise:

```
38 second pe caption aur pill ek doosre ke upar aa rahe hain.
```

Utna hi specific feedback sabse tez kaam karta hai. "Achha nahi lag raha" se kuch nahi hota.

5 **Approve karke final render maango**

Final mein quality mat girne do. Source 4K 60fps hai toh final bhi wahi. Bolo:

```
final ko source quality pe rakho, 60fps, koi downscale nahi.
```

FEEDBACK DENE KA TAREEKA

Bekaar feedback	Kaam ka feedback
Captions theek nahi lag rahe	12 se 18 second tak captions 2 word ke hain, 3 se 4 karo
Thoda tez karo	Clip 3 aur 4 ke beech ka 0.8 second ka gap hata do
Colour ajeeb hai	Caption highlight yellow rakho, abhi orange dikh raha hai
Kuch missing hai	25 second pe jab main "teen cheezein" bolta hoon, wahan 1, 2, 3 chips lagao

Pehle reel ka realistic expectation

Pehla preview perfect nahi hoga. 2 se 3 round feedback normal hai. Teesre reel tak tumhe pata hoga ki pehle prompt mein hi kya add karna hai, aur rounds kam ho jayenge.

KAUNSA PIPELINE

12 hain, tumhe ek chahiye

Shuru mein sirf **talking-head**. Baaki tab dekhna jab zarurat pade.

Pipeline	Kab use karo
`talking-head`	**Tum camera pe bol rahe ho. Yapper reels. Yahin se shuru karo.**
`hybrid`	Tumhari footage plus support visuals aur graphics
`clip-factory`	Ek lambi video se kai chhote clips nikalne hain
`screen-demo`	Screen recording, tutorial, product walkthrough
`documentary-montage`	Real archival footage ka montage, free sources se
`animated-explainer`	Sirf topic do, poora explainer khud ban jaata hai
`cinematic`	Trailer, teaser, mood wala edit
`podcast-repurpose`	Podcast se highlights aur clips

Pipeline chunne mein time waste mat karo

Yapper reel ke liye hamesha talking-head. Baaki 4 pipelines beta mein hain, unhe abhi chhod do.

SABSE KAAM KI BAAT

Isse tumhara output generic nahi dikhega

OpenMontage mein composition ke do tareeke hain. Zyada log pehla use karte hain aur phir sabke video ek jaise lagte hain.

Templated

Ready made scene types uthake jodh diye jaate hain. Text card, stat card, chart, callout.

Fast hai, bharosemand hai.
Par har koi wahi use kar raha hai. Isi wajah se AI se bane video ek jaise dikhte hain.

Atelier

Agent tumhare is ek video ke liye composition khud se likhta hai. Apna caption style, apna motion, apna look. Koi ready made component nahi.

Zyada time lagta hai.
Par output tumhara dikhta hai, kisi template jaisa nahi.

Main kya karta hoon

Mere reels mein captions ka apna style hai. Koi black box nahi, thodi ke paas placement, yellow highlight. Wo stock component se nahi aata. Isliye main hamesha atelier mode bolta hoon. Tum bhi bolo. Ek line hai, aur poora output badal deti hai:

```
Composition atelier mode me likhna, stock template mat use karna.
```

DAY 58 KA REEL, POORA HISAAB

8 raw clips, 45.3 sec	**43.3s** final length	**52** caption chunks
2160x3840 resolution, 60 fps	**934 MB** final file size	**Rs 0** API kharcha

Transcription: Whisper large-v3, local. Sirf mera laptop, FFmpeg, Whisper aur Remotion. Kuch bhi cloud pe nahi gaya.

MERI GALTIYAN

Taaki tumse na hon

Har ek ke saath: kya hua, aur kya karna hai.

DIKKAT

Lamba schema error aaya. Maine brief mein platform `instagram_reels` likha tha, system sirf `instagram` leta hai.

FIX

Error padho. Usi mein saaf likha hota hai ki kya allowed hai. Bas badal do. Ghabrao mat.

DIKKAT

Windows PowerShell lambi `python -c "..."` commands quotes ki wajah se tod deta hai.

FIX

Assistant ko bolo: "script ko ek file mein likho, phir chalao." Turant theek.

DIKKAT

Backlot board (browser wala live storyboard) meri machine pe start hi nahi hua.

FIX

Kuch nahi. Production phir bhi poora chala. Wo sirf dekhne ke liye hai, zaruri nahi.

DIKKAT

Default captions ke peeche kaala box aata hai aur screen ke bilkul neeche baithta hai. Achhi lighting wali footage kharab lagti hai.

FIX

Prompt mein "koi black box nahi" aur "atelier mode" likho. Apna caption likhwao. Page 5 ka prompt yahi karta hai.

DIKKAT

Repo ke andar ek guideline 50 MB target batati hai. Lagta hai Instagram ki limit hai.

FIX

Wo Instagram ka rule nahi hai. Instagram bade file leta hai aur khud compress karta hai. Apni sabse achhi quality upload karo.

General rule

Jab kuch toote, pehle error ka aakhri 5 line padho. 80% baar wahin jawab hota hai. Phir assistant ko error paste karo aur bolo "ye fix karo". Khud Google mat karo.

EXPECTATION SAHI RAKHO

Ye kya nahi karega

- **Tumhari jagah bolega nahi.** Script aur delivery tumhari hi rahegi.
- **Ek click mein viral reel nahi milegi.** Pipeline achhi hai, taste tumhara lagega.
- **Pehli baar setup mein time lagta hai.** Ek baar ka kaam hai, par lagta hai.
- **4K 60fps render mein achha khaasa time jaata hai.** Laptop garam hoga.
- **Kuch pipelines abhi beta mein hain.** Kaam karti hain, thodi rough hain.

PEHLE REEL SE PEHLE KI CHECKLIST

- [ ] Python, Node, FFmpeg install, teeno ka version check ho gaya
- [ ] Repo clone, setup chala, `.env` file ban gayi (khaali)
- [ ] Clips alag folder mein, `clip1.mp4` style naam, compress nahi kiye
- [ ] Clips wale folder mein assistant khula, OpenMontage folder mein nahi
- [ ] Page 5 ka prompt copy kiya, apne hisaab se ek bhi line hataayi nahi
- [ ] Preview pehle maanga, final baad mein
- [ ] Final mein "source quality, 60fps, no downscale" bola

Agar ye 7 tick hain

Tumhara pehla reel ban jayega. Perfect nahi, par ban jayega. Doosra behtar hoga. Chautha tumhara dikhne lagega.

AAKHRI BAAT

Ek cheez pe expertise kar lo.

Har teesre din nayi cheez aati hai. Different wrapper, same thing. Tum toh bas ek pe gehre jao.

OpenMontage maine nahi banaya. Main sirf use karta hoon. Open source hai, AGPLv3 license, calesthio ne banaya hai.

`github.com/calesthio/OpenMontage`

Kaam aaye toh repo ko ek star de dena. Free tool banane walon ko wahi milta hai.
