Your Personal AI Job Finder

A simple guide to find jobs that match your real skills.

by Mudit Jain

2 prompts. 2 chats. No coding. Just copy, paste, answer, and apply.

JOB 5

JOB 4

JOB 3

JOB 2

JOB 1

What this PDF does

It helps AI understand you first, then find jobs that fit you.

1. Chat 1 understands you

You answer simple questions about your skills, work, location, and limits.

2. Chat 2 finds jobs

You paste your profile into a new chat. AI searches jobs and ranks them.

3. You get a job page

AI creates a small HTML page with job cards and apply links.

Remember

Do not skip Chat 1. Random job searches give random jobs.

The steps

Follow this exactly.

1. Open ChatGPT or Claude

Start a new chat. Paste Prompt 1.

2. Answer honestly

Small projects and basic skills are okay. Do not fake anything.

3. Copy your profile

AI will give you JOB FINDER PROFILE. Copy the full thing.

4. Open a new chat

Paste Prompt 2. Then paste your profile at the bottom.

5. Check the jobs

Open the links yourself before applying.

Prompt 1

Use this first. It makes your job profile.

COPY THIS

You are my Job Profile Builder.

Do not find jobs yet.
Ask me these questions one by one.
Use very simple language.
If I say "I don't know", help me answer.

Questions:
1. What do you do right now?
2. What skills do you have?
3. What tools or software can you use?
4. What have you built, studied, or worked on?
5. What kind of job do you want?
6. Remote, office, hybrid, or anything?
7. Which city/country can you work from?
8. What jobs do you NOT want?
9. What limits should we remember? Time, college, exams, salary, language, laptop, internet, etc.

After all answers, create one copyable output called:
JOB FINDER PROFILE

Inside it, include:
- My short profile
- My real skills
- My proof of work
- Best job roles for me
- Jobs I should avoid
- Search keywords
- Location and remote preference
- Rules for ranking jobs

Do not invent anything.

How to answer Prompt 1

Keep your answers simple. The goal is honesty, not sounding fancy.

- Write what you can actually do.
- Mention small projects too.
- Say beginner if you are a beginner.
- Mention your city and remote preference.
- Mention what jobs you do not want.
- At the end, copy the full JOB FINDER PROFILE.

Example answer

I am a college student. I know Python basics, Excel, Canva, ChatGPT, and basic video editing. I can work 2 hours per day. I want remote internships or freelance work. I do not want sales calling jobs.

Prompt 2

Use this in a new chat after Prompt 1.

COPY THIS

You are my Personal Job Finder Agent.

Use the JOB FINDER PROFILE below.
Find real jobs that match me.
Do not make up jobs.
Every job must have a real apply link.

If you can browse the internet:
- Search current jobs.
- Scan at least 50 jobs if possible.
- Pick the best 5 to 10 jobs for me.

If you cannot browse:
- Ask me to paste 10 to 20 job links.
- Then rank only those links.

For every job, show:
1. Rank
2. Job title
3. Company
4. Location or remote status
5. Apply link
6. Fit score out of 100
7. Why it fits me
8. One warning
9. First action I should take

After the list, create one simple HTML page.
HTML style:
- Mobile friendly
- Dark background
- Yellow highlights
- Clean job cards
- Apply buttons

Give me:
1. The ranked job list
2. The full HTML code
3. Steps to save it as job-finder.html

Here is my JOB FINDER PROFILE:
[PASTE YOUR PROFILE HERE]

If AI cannot browse

This is normal. Use this simple backup method.

- Open job sites yourself.
- Search using the keywords from your profile.
- Copy 10 to 20 job links.
- Paste the links into AI with the prompt below.

BACKUP PROMPT

I do not have browsing in this chat.
I will paste job links manually.
Use my JOB FINDER PROFILE and rank these jobs.
Tell me fit score, why it fits, warning, and first action.
Do not invent details.

Job links:
[PASTE LINKS HERE]

How to save the HTML

The HTML is just a small webpage for your job results.

1. Ask for a file

Tell AI: Make this downloadable as job-finder.html.

2. If there is no file

Copy the HTML code.

3. Paste into Notepad

Save it as job-finder.html, not job-finder.txt.

4. Open it

Double-click the file. It opens in your browser.

Phone tip

If saving HTML on phone feels hard, just use the ranked job list. The HTML is optional.

Before you apply

AI can help, but you must verify.

- Open the apply link yourself.
- Check if the job is still open.
- Check location and remote rules.
- Check experience required.
- Do not pay money to apply for a job.
- Customize your resume before applying.

Resume mini prompt

Use my JOB FINDER PROFILE and this job description.
Tell me what to change in my resume.
Give me:
1. Best resume headline
2. Skills to highlight
3. Projects to mention
4. 5 bullet points
5. Short message to send

Job description:
[PASTE JOB DESCRIPTION HERE]

If results are bad

Use these quick fixes.

Jobs are too senior

Tell AI: Only show beginner, intern, fresher, junior, or entry-level roles.

Jobs are random

Tell AI: Be stricter. Remove jobs that do not match my skills and location.

AI makes up jobs

Tell AI: Use only real jobs with real apply links. Mark anything unsure as not verified.

Too many jobs

Tell AI: Show only the best 5 jobs, ranked from most realistic to least realistic.

Simple rule

Do not ask AI for random jobs. Ask AI to filter jobs for your profile.

Your goal is not to apply everywhere.

Your goal is to apply where you have a real chance.

Use Prompt 1. Copy the profile. Use Prompt 2. Verify the links. Apply smart.
